

**"Straw for Energy Production", second edition, provides a readily accessible background information of special relevance to the use of straw in the Danish energy supply.**

**Technical, environmental, and economic aspects are described in respect of boiler plants for farms, district heating plants, and combined heat and power plants (CHP). The individual sections deal with both well-known, tested technology and the most recent advances in the field of CHP production.**

**This publication is designed with the purpose of reaching the largest possible numbers of people and so adapted that it provides a valuable aid and gives the non-professional, general reader a thorough knowledge of the subject.**

**"Straw for Energy Production" is also available in German and Danish.**
